

## Quantum Choice Highlights

### Flexible Design

- Flexible building block approach to benefit plan design saves setup time and allows for more products and consumer choices as well as international benefits administration
- Premium billing statement
- Criteria-based logic for extensive application of configurable rules
- Single provider payment contract for multiple payment methods

### Process Automation

- Optimal agility in claims, premium capitation and operational support
- Automated correspondence and tracking including even correspondance chains
- Automated reports scheduling including print, email, save electronic copy, and more
- Individual member/whole family benefits management

### Advanced Technology

- Highly configurable and scalable
- Multilevel role-based security management
- Cost effective rules-based, scalable Service Oriented Architecture (SOA)
- Interoperability and seamless integration
- Ability to modify processing "step" engines to meet clients' specific needs

## Next Generation in Benefit Management Technology

### The New Standard of Agile, Rapidly Deployable, Cost-saving Benefit Management Technology is Here

Quantum Choice combines a user-configurable rules-based processing engine, .NET platform and distributed architecture to deliver a powerful new benefits management solution. Its state-of-the-art technology optimizes your current business processes and allows for seamless integration with web-based tools; flexible design and user-configurable rules make it easy to add new products.

### Scalable to Grow with Your Business

Distributed architecture partitions systems and software to enable a flexible building block approach to system design and growth. This approach allows business to inexpensively increase performance and scale-out by simply adding additional application servers as needed.

### Internal AP/AR Accounting System

On-board accounting system allows for user-defined account numbers segments, creation and maintenance of GL accounts and bank reconciliation. Export to an external GL is supported, but not required.

### Enterprise Administration

Allows for security-protected management of global settings, including code and code group management, patient notes result codes, and more.

### Multilevel, Role-based Security

User-defined database roles control access to forms and processes, providing an effective means for enforcing and automating system security. Security extends to record and data levels, giving complete confidence to groups administering their own employees' plans.

### Workflow Automation

Streamlines operations by automatically triggering correspondence and routing claims to the appropriate workgroup for processing. Enhances customer service, claim analysis and adjudication, automated billing, payment, and reporting.

### Agile Workflow Automation Boosts Efficiency, Cuts Costs

Configurable workflow automation significantly increases productivity, analysis and processing, improves auto-adjudication speed and enhances customer service, billing and payment.

### About Plexis Healthcare Systems, Inc.

One of the fastest growing payer systems software developers in the healthcare market-place, Plexis has provided cost-saving solutions for healthcare organizations since 1996. Plexis serves healthcare payer organizations across the United States and in several international regions including Canada, Asia, Middle-East, Africa, South America and the Caribbean.

A Certified Microsoft Partner, Plexis Healthcare Systems' benefit administration tools employ the very latest Microsoft technology. Plexis is also a selected partner in Microsoft's Connected Health and Human Services (HHS) alliance.

Plexis software and services enable healthcare organizations to reduce costs, streamline and automate their administrative operations, increase efficiency and enhance customer satisfaction while helping them meet current governmental regulations.

Plexis Healthcare Systems, Inc.  
385 Williamson Way, Ashland, OR 97520
